Office Action Summary	Application No. 10/714,276	Applicant(s) MORGENSTERN ET AL.	
	Examiner Tien Dinh	Art Unit 3644	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 11 April 2005.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-12 and 29-39 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-12, 29-39 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. _____.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- * See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-12, 29-39 are rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Darden.

Darden teaches design steps taken to configure the aircraft for low sonic boom supersonic flight conditions by an equivalent area distribution curve of the aircraft to approximate an ideal equivalent area distribution goal. The ideal equivalent area distribution goal curve is what one skilled in the art would want so that would motivate one skilled in the art to achieve that.

Although Darden doesn't seem to specifically mention about "relaxing a design constraint", one skilled in the art would have "relaxed the design constraint" as desired to design an optimally performing aircraft. Please note that Darden teaches segmenting the wing into panels to analyze them and thus smoothing the configuration of each panel, determining the design variables along the Mach angle lines, determine an angle incident angle and shape of the remain portions for maximum lift-to-drag ratio. Darden also discloses using F-function to determine the minimized sonic boom disturbance and scaling the equivalent area distribution goal curve to maintain the desired aircraft weight. Darden also inherently teaches redistributing the areas of lift subject to center of pressure constraints to achieve the desired balance characteristics. Furthermore, Darden teaches that redistributing the lift of the wing by having the far-field expansion ahead of

Art Unit: 3644

the areas of far-field compression and scaling an equivalent area distribution goal curve to maintain the desired aircraft weight that counter excursions below the equivalent area distribution goal curve.

Re claims 5 and 33, to re-determine the incidence angle and remaining portion is an inherent step that one skilled in the art would have taken to design an optimal operating aircraft.

Re claims 6, 7, and 35 to optimize the configuration is a step that one skilled in the art would have taken to improve the design of the aircraft.

Re claims 10 and 38 to analyze the sonic boom below and to the side of the aircraft and to perturb the aircraft design variables are steps that one skilled in the art would have used in designing the whole aircraft.

Re claim 11, adjusting and reshaping are steps that one skilled in the art would have taken to improve the design of the aircraft.

Re claim 39, please note that allow a use to define a design variable is an inherent step one skilled in the art would have taken to optimize the design of the aircraft.

Response to Arguments

In response to applicant's arguments that the Darden reference doesn't detail the process of scaling an equivalent area distribution curve of the aircraft to approximate an ideal equivalent area distribution goal, the Examiner respectfully disagrees. In the design process, when one skilled in the process wants to make the most optimal design, one skilled in the art would have computed an ideal equivalent area distribution goal and scale the equivalent area distribution curve of the desired aircraft to as close as the ideal distribution goal. In her summary, Darden

Art Unit: 3644

clearly mentions his method of designing sonic-boom-minimizing equivalent area distributions for supersonic cruise conditions. Darden also teaches "relaxation" as seen in the summary. She also teaches the calculations/experimentations that goes into configuring an aircraft for low sonic boom supersonic flight. Concerning claims 2-12, 22-39, please note that Examiner believes that these are steps that one skilled in the art would have taken since they would result in the optimal design for the aircraft. Re claim 29, please note that the nose design process can easily be translated to the design of the wing of the aircraft since the process of designing aerodynamic flow around the nose would lead one skilled in the art to design the wing (using a similar process) to reduce sonic boom during supersonic flight conditions.

Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.
